Design Optimization in Aerospace Engineering

5/21/2018

Report #1

Solve (1) the two-objective welded beam design problem and (2) the car side impact problem using three multiobjective evolutionary algorithms.

Compare the results and discuss why the difference in the results appears.

You may use the open source codes on MOEA Framework, Jmetal, or PlatEMO. (Off course, you may develop your own code)

For JAVA environment, “eclipse” is recommended.

The report should be submitted to Department Office by **June 15 (Fri) 4:00PM (submission deadline is extended)**
